LOAN MANAGEMENT SYSTEM – FULL DEVELOPMENT SPECIFICATION

1. Project Overview

This document defines the full scope of a Loan Management SaaS platform tailored for Zambian lending operations, including payslip loans, collateral loans, CRB checks, PMIC guarantees, and regulatory compliance.

2. System Objectives

• Automate loan applications, approvals, disbursements, and repayments
• Support configurable loan products for any loan type
• Enable secure borrower verification and audit trails
• Operate as a scalable multi-tenant SaaS

3. User Roles

• Super Admin
• Company Admin
• Loan Officer
• Finance Officer
• Legal Officer
• Borrower
• Auditor

4. Core Modules

Borrower Management
Registration, KYC, document uploads, credit score, blacklist

Loan Products
Unlimited products, configurable interest (daily/weekly/monthly/yearly), fees (processing, legal, enforcement), location-based eligibility

Loan Processing
Applications, eligibility engine, CRB & PMIC hooks, approvals, disbursement

Repayments
Manual & bulk repayments, auto-calculation, receipts, schedules

Legal & Court Cases
Case tracking, lawyer assignment, legal cost deductions

Dashboard & Reports
Funds out, expected returns, interest vs principal, overdue loans

5. Integrations

• CRB API (mandatory pre-approval credit check)
• PMIC module (loan guarantee per product)
• Brevo (Email, SMS, WhatsApp notifications)
• Multi-Factor Authentication (MFA)

6. Security & Compliance

Role-based access control, encrypted document storage, audit logs, payslip password handling, consent management

7. SaaS Capabilities

Multi-tenant structure, tenant-level configuration, AI-token billing readiness, subscription and usage tracking

8. Admin Configuration

Activate/deactivate loan products, configure calculations, define eligibility rules, manage locations and fees

9. Borrower Portal

Apply for loans, upload contracts and payslips, view repayment schedules and loan status

10. MVP Status

Approximately 90% complete. Remaining work includes endpoint refinements, validations, integrations finalization, and testing.
